MIST-FREE PHOTO MIRRORS

Features and Benefits

Mist free surface of photo mirror due to the air ventilation

- Air volume can be increased or decreased according to patient requirement and/or doctor preference via +/- keypad.
- The air volume level will be indicated on the keypad via LED's.
- The last position of air volume level (after 30 seconds use) will be memorized for the next use.

Angulation of the Photo Demister Handle

- More comfortable handling.
- Better access for the digital camera.
- Can be easily held by patient (doctor can take photos without assistant).

Modified mirror clamp fixation system, made of stainless steel

- Safe holding of the mirrors.
- Easy One-Screw-Fixation of the mirror.
- Photo Mirrors can be fixed in the PMD at every side,

New material of PMD-Corpus

- Contains silver ions - antibacterial influence.
- Can be completely disinfected with a disinfection cloth.
- No discolouration/ changing of colour even after extended use.
- Light weight.
- More robust construction.

The LED light

- Helps focusing of digital camera.
- No blinding of patient eyes.
- Dispersive light beam.

Changing of battery

- Uncomplicated and very easy via standard Micro-USB connector.
- Red LED indication of chargin progress.
- Battery overload protection.
- Now available with EU & USA sockets.
- Easy battery replacement - available to purchase from Orthoshop.
- Easy charger replacement - available to purchase from Orthoshop.

Stainless steel mirrors

- Better thermal conductivity than by glass mirrors - very quick adoption of patient body temperature.
- More robust and longer life than glass mirrors.
- Mirror surface on both sides.
- Easy to clean and sterilise (also ultrasonic cleaning).

Diverse accessories for more comfort

- Sterilisation cassette for photo mirrors - comfortable sterilisation and storage.
- Retractors made of stainless steel - very long life.
